| AgenticLoan AI:                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="#">Github</a> | Feb 2026 |
| Developed an Agentic AI-powered Loan Approval System using React, Node.js, and MongoDB to automate digital lending workflows . Integrated a GPT-based chatbot and voice assistant to collect applicant data, evaluate eligibility, and auto-submit loan applications.Built an Admin Dashboard for document verification, approval management, and real-time application status tracking.                                     |                        |          |
| SEMS:                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="#">Github</a> | Sep 2025 |
| Developed SEMS, a smart sports event management system with unique ID registration and scan-based verification for secure entry. Implemented automated access control, real-time participant tracking, and a role-based admin dashboard. Designed a responsive user interface for seamless registration and event management. Integrated secure database operations to ensure reliable data handling and system performance. |                        |          |
| Abbu Assistant:                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="#">Github</a> | Mar 2025 |
| Built Abbu Assistant, an AI-powered voice assistant with speech recognition. Performs web searches, plays songs on YouTube, and automates daily tasks through voice commands. Integrated Google services for seamless and intelligent user interaction.                                                                                                                                                                      |                        |          |

## ACHIEVEMENTS

- **Runner-up** in the event Ripple Room (PP) at Srishti 2K25, PSG Tech College, and participated in various technical events.
- **Secured 2nd prize** in Paper Presentation at Fiestaa '26, KPR College of Engineering, and participated in Gen AI and IoT Hackathons.
- **Finalist** in Embadathon (Inter-college competition).
- Participated in Creatathon and Freshathon events, showcasing creativity and innovation skills.
- Participated in multiple online hackathons on platforms such as Unstop and Devfolio, gaining hands-on experience in problem-solving and collaborative development.

## TECHNICAL SKILLS

|                                                                                           |
